

Screening won't protect your patients from most cancer caused by HPV infection. HPV VACCINATION FOR BOYS & GIRLS AT AGES 11-12 CAN.

CERVICAL CANCER

Just the tip of the iceberg.

Even with screening, in the United States
13,000 women are diagnosed with
cervical cancer each year.

Based on: Viens et al. MMWR 2016; 65 (26). <https://www.cdc.gov/cancer/hpv/statistics>

Cervical cancer is the only type of HPV cancer for which there is a recommended screening test.

CERVICAL PRECANCERS

Screening can detect cervical precancers, which may require additional invasive testing and treatment. HPV vaccination can prevent most of this.

Sources: Joura EA. et al. Cancer Epidemiol Biomarkers Prev. 2014 Oct;23(10):1997-2008. Guan P. et al. Int J Cancer. 2012 Nov 15;131(10):2349-59.

CASES EVERY YEAR

~216,000 HIGH GRADE
CERVICAL LESIONS
~468,700 LOW GRADE
CERVICAL PRECANCERS

OTHER HPV CANCERS

CASES EVERY YEAR

700 PENILE CANCER
3,100 VULVAR & VAGINAL CANCER
5,500 ANAL / RECTAL CANCER
11,600 OROPHARYNGEAL CANCER

Recommended cancer screening tests are not available yet for other cancers caused by HPV infection.

OVER 90%

of cancers caused by HPV are preventable through HPV vaccination

Based on: Viens et al. MMWR 2016; 65 (26). <https://www.cdc.gov/cancer/hpv/statistics>

**Don't rely on screening to catch it later.
Protect them now with HPV vaccination.**
