Co-Occurring Disorders in Gerontology: 
**The Importance of Interprofessional Management in Primary Care**

Maine is the “greyest state” in the nation. Never has it been so essential for primary care providers to understand the importance of working closely with others in the healthcare field to identify and address the complex health and social needs of elders.

This workshop is the first in a series to provide information to primary care providers, therapists, counselors, health professions, students and faculties on the growing – and changing – needs of our complex elder population.
