A few sobering facts about healthcare......

in other words... here is a clue to the destination!
Foundation of Federal Initiatives

◆ Three IOM Reports
  – To Err is Human-1999
  – Crossing the Quality Chasm- 2001
  – Leadership by Example- 2002
To Err is Human

America’s wake up call about medical errors in our healthcare system

- 44,000 – 99,000 deaths from medical errors annually
  - (Another ~100,000 from healthcare associated infections)
- Between $17-29 billion annually
- Report highlighted the fact that human error is inevitable – the only way to reduce medical errors is to design a safer system

http://www.nap.edu/openbook.php?isbn=0309068371
“Our results indicate that, on average, Americans receive about half of recommended medical care processes.”
U.S. scores dead last again in healthcare study

By Maggie Fox, Health and Science Editor
WASHINGTON | Wed Jun 23, 2010 4:48pm EDT

(Reuters) - Americans spend twice as much as residents of other developed countries on healthcare, but get lower quality, less efficiency and have the least equitable system, according to a report released on Wednesday.
Figure 1. International Comparison of Spending on Health, 1980–2005

Average spending on health per capita ($US PPP)

Total expenditures on health as percent of GDP

Percent change

- **Net cost of private health insurance administration**: 109%
- **Family private health insurance premiums**: 91%
- **Personal health care**: 65%
- **Workers earnings**: 24%

Northeast Health Care Quality Foundation
The QIO for Maine, New Hampshire & Vermont
National Health Expenditures, 2006

- Hospital Care: 30%
- Physician/clinical services: 21%
- Other professional services: 10%
- Nursing home care: 6%
- Home health care: 3%
- Retail - Rx drugs: 10%
- Retail - Other products: 3%
- Program Administration: 7%
- Govt. public health activities: 3%
- Investment: 7%

Total = $2.106 Trillion

Volume-based Payment

- Lack of accountability for the overall quality and costs of care—and for local capacity;

- A flawed payment system that rewards more care, regardless of the value (or quality) of that care.
  - In most settings a licensed physician can order any test, procedure, or treatment regardless of whether there is true patient need
    - Often times these tests or treatments result in unnecessary patient harm
Physicians who own and bill for nuclear cardiac stress-test technology are twice as likely to order the procedure as those who aren't paid for it, according to a study published in the *Journal of the American Medical Association*. Investigators found that physicians who owned the equipment ordered tests in 10 percent of the
American Hospital Quality Outcomes 2013:
Healthgrades Report to the Nation
Executive Summary

More than 90% of Americans think that choosing a physician or hospital is at the top of the list of significant life decisions, but most of them spend more time in selecting a new car than they do in choosing a physician, specifically:

42% spend 10 or more hours researching a car

34% spend less than one hour researching a physician

45% are not aware that there is data available on the chance of dying at a hospital

42% are not aware that there is data available on a hospital’s complication rates

34% know where to access information about a hospital’s performance

American consumers don't feel informed about how hospitals perform in caring for patients:
Quality of Care according to Level of Medicare Spending in Hospital Referral Region of Residence.

</table>

* ACE = angiotensin-converting enzyme; EOL-EI = End-of-Life Expenditure Index; MCBS = Medicare Current Beneficiary Survey; MI = myocardial infarction.
† Arrows show the direction of any statistically significant association ($P \leq 0.05$) between the percentage of patients receiving a specified service and regional EOL-EI differences. An arrow pointing upward indicates that as spending increases across regions, the percentage of patients receiving a specified service increases. A $P$ value greater than 0.05 was considered not significant.
‡ Values are for patients who were ideal candidates for the specific treatment, defined as having no absolute or relative contraindication.

Note: * Estimate. Expenditures shown in $US PPP (purchasing power parity).

The Cost of a Long Life

Average Life Expectancy

Per Capita Spending (International Dollars)

- United States: $4,500 Per Capita
Challenges to our Healthcare System

- Unsustainable increase in health spending – about $2.3 trillion per year in the U.S.
  - Large geographic variations in spending
- Costs driven by technology related changes in medical practice (financial incentives)
- Large variations in clinical care when evidence is unclear
- Uncertainty about best practices involving treatments and technologies
- Overall poor quality of care compared to other developed countries
Foundation of Federal Initiatives

◆ Three IOM Reports

– To Err is Human-1999
– Crossing the Quality Chasm- 2001
– Leadership by Example- 2002
RECOMMENDATION 1: The federal government should assume a strong leadership position in driving the health care sector to improve the safety and quality of health care services provided to the approximately 100 million beneficiaries of the six major government health care programs. Given the leverage of the federal government, this leadership will result in improvements in the safety and quality of health care provided to all Americans.
CMS took them at their word…
Size and Scope of CMS Responsibilities

- CMS is the largest purchaser of health care in the world.
- Combined, Medicare and Medicaid pay approximately one-third of national health expenditures (approx $800B).
- CMS programs currently provide health care coverage to roughly 105 million beneficiaries in Medicare, Medicaid and CHIP; or roughly 1 in every 3 Americans.
- The Medicare program alone pays out over $1.5 billion in benefit payments per day.
- Through various contractors, CMS processes over 1.2 billion fee-for-service claims and answers about 75 million inquiries annually.
- Millions of consumers will receive health care coverage through new health insurance exchanges authorized in the Affordable Care Act.
National Quality Strategy

Overview

NATIONAL QUALITY STRATEGY
Better Care. Affordable Care. Healthy People/Healthy Communities.

Northeast Health Care Quality Foundation
The QIO for Maine, New Hampshire & Vermont
National Quality Strategy promotes better health, healthcare, and lower cost.
The Affordable Care Act (ACA) requires the Secretary of the Department of Health and Human Services (HHS) to establish a national strategy that will improve:

- The delivery of health care services
- Patient health outcomes
- Population health
The strategy is to concurrently pursue three aims:

**Better Care**
Improve overall quality by making health care more patient-centered, reliable, accessible and safe.

**Healthy People / Healthy Communities**
Improve population health by supporting proven interventions to address behavioral, social and environmental determinants of health, in addition to delivering higher-quality care.

**Affordable Care**
Reduce the cost of quality health care for individuals, families, employers and government.

Northeast Health Care Quality Foundation
The QIO for Maine, New Hampshire & Vermont
And focus on six priorities:

◆ Making care safer by reducing harm caused in the delivery of care.

◆ Ensuring that each person and family are engaged as partners in their care.

◆ Promoting effective communication and coordination of care.

◆ Promoting the most effective prevention and treatment practices for the leading causes of mortality, starting with cardiovascular disease.

◆ Working with communities to promote wide use of best practices to enable healthy living.

◆ Making quality care more affordable for individuals, families, employers, and governments by developing and spreading new health care delivery models.
Foundational Principles of the CMS Quality Strategy

- Eliminate disparities
- Strengthen infrastructure and data systems
- Enable local innovations
- Foster learning organizations
CMS Quality Strategy Six Goals

- Make care safer
- Ensure person and family engagement
- Promote effective communication and coordination of care
- Promote effective prevention and treatment
- Promote best practices for healthy living
- Make care affordable
Patient Engagement

◆ Refers to your patients’ and/or stakeholders’ investment in or commitment to your brand and product offerings. It is based on your ongoing ability to serve their needs and build relationships so they will continue using your products.
Patient Engagement

Characteristics include their loyalty, their willingness to make an effort to seek health care services with your organization, and their willingness to actively advocate for and recommend your organization and health care service offerings.
Initial Implementation Activities

- Partnership for Patients (patient safety)
- Multi-payer Advanced Primary Care Practice Demonstration (care coordination)
- Million Hearts Campaign (cardiovascular disease prevention and treatment)
- Use of HCAHPS patient experience results in Value-Based Purchasing hospital payment (person-centered care)
- Community Transformation Grants (working with communities to enable healthy living)
- CMS Innovation Center 21 initiatives (development new delivery models)-ACOs being the leading candidate!
- NQS serves as the framework for the current QIO program
National Quality Strategy

Embedding the National Quality Strategy into CMS programs

Example: Quality Measurement
CMS Reporting and Payment Programs

**Hospital Quality**
- Medicare and Medicaid EHR Incentive Program
- PPS-Exempt Cancer Hospitals
- Inpatient Psychiatric Facilities
- Inpatient Quality Reporting
- HAC payment reduction program
- Readmission reduction program
- Outpatient Quality Reporting
- Ambulatory Surgical Centers

**Physician Quality Reporting**
- Medicare and Medicaid EHR Incentive Program
  - PQRS
- eRx quality reporting

**PAC and Other Setting Quality Reporting**
- Inpatient Rehabilitation Facility
- Nursing Home Compare Measures
- LTCH Quality Reporting
- Hospice Quality Reporting
- Home Health Quality Reporting

**Payment Model Reporting**
- Medicare Shared Savings Program
- Hospital Value-based Purchasing
- Physician Feedback/Value-based Modifier
- ESRD QIP

**“Population” Quality Reporting**
- Medicaid Adult Quality Reporting
- CHIPRA Quality Reporting
- Health Insurance Exchange Quality Reporting
- Medicare Part C
- Medicare Part D
CMS Vision for Quality Measurement

- Align measures with the National Quality Strategy and Six Measure Domains
- Implement measures that fill critical gaps within the 6 domains
- Align measures across programs where appropriate
- Focus on patient centered measures (patient outcomes and patient experience)
- Leverage opportunities to align with private sector (e.g., NQF MAP)
- Parsimonious sets of measures; core sets of measures and measure concepts
- Removal of measures that are no longer appropriate
CMS framework for measurement maps to the six national priorities

Clinical quality of care
- HHS primary care and CV quality measures
- Prevention measures
- Setting-specific measures
- Specialty-specific measures

Person- and Caregiver-centered experience and outcomes
- CAHPS or equivalent measures for each setting
- Functional outcomes

Care coordination
- Transition of care measures
- Admission and readmission measures
- Other measures of care coordination

Safety
- HCACs, including HAIs
- All cause harm

Population/ community health
- Measures that assess health of the community
- Measures that reduce health disparities
- Access to care and equitability measures

Efficiency and cost reduction
- Spend per beneficiary measures
- Episode cost measures
- Quality to cost measures

Greatest commonality of measure concepts across domains

• Measures should be patient-centered and outcome-oriented whenever possible

• Measure concepts in each of the six domains that are common across providers and settings can form a core set of measures

Northeast Health Care Quality Foundation
The QIO for Maine, New Hampshire & Vermont
Cross-cutting Foundational Principles

- Eliminate disparities (includes health literacy)
- Strengthen infrastructure and data systems
- Enable local innovation
- Foster learning organizations
New Payment Models/Methods

• Value Based Purchasing
• Non-payment for unwanted outcomes
  • CAUTI, Fractures, Readmissions
• PCMH Demonstrations
• Shared Savings Models- ACO’s
Patients with Alzheimer’s Disease

- What does all this have to do with a patient with this disease
- Let us look at the intersection of the National Quality Strategy Goals and this disease vs what we have today
CMS Quality Strategy Six Goals

Make care safer
Ensure person and family engagement
Promote effective communication and coordination of care
Promote effective prevention and treatment
Promote best practices for healthy living
Make care affordable
Safer care benefits this population that is particularly at risk for exposure to unsafe care for a multitude of reasons.
Ensure person and family engagement

- This will drive the health system to focus on the care givers needs and the patients needs not the health system needs
Promote effective communication and coordination of care

- Minimize transitions of care
- Improve the coordination of care and the communication regarding the care
Promote effective prevention and treatment

- Focus on what works not on just trying something
- Reduction of conflicting medications
Promote best practices for healthy living

- Supporting family so they can support the patient
Health systems will be responsible for the comprehensive care of the patient. New and innovative ways to provide care will aid families in the care of the family member with this disease.
The ACA has and will change health care as we know it

The NQS is the road map to where we are going and for once, everyone has a roadmap to follow

CMS will drive the change through every leaver in its toolbox because it has to to survive
Summary

- Global Payment mechanisms have and will further reduce costs and have and will improve performance
- Care will shift and be supported in lower overhead environments which will, out of necessity engage families
- Patients will chronic disease will be focused on because that is where the cost is
Patients with Alzheimer’s (as well as other dementia’s) will benefit because of:

- improved safety
- Increased family and patient engagement
- a focus on over- and mis- treatment
- Driving for affordability
Thank you
