- \$500 Book Allowance / year
- \$500 Conference Allowance for 3rd yr Residents
- Dedicated Core Teaching Faculty
- Electronic charting and order entry

The Family Medicine Residency Program of St. Joseph's Regional Medical Center recognized as its primary mission the education of Residents who will practice the highest quality family medicine, which is related to the needs of their community. We are committed to family-oriented healthcare, preparation for the future, academic excellence, and leadership and personal growth.

The program's 36-month curriculum is seamlessly integrated allowing Osteopathic physicians to fulfill both the ACTME and AOA Family Medicine Board requirements. Centered on core lectures, the diverse and innovative curriculum is offered on two 18-month cycles to include department and institutional Grand Rounds, Morning Conference and lectures given during our weekly morning academic sessions

In addition to didactic and clinical responsibilities, Residents are also required to complete a presentation-grade research project.

Many of our graduates enter clinical practice, either starting practices of their own or joining those already established. The patient populations served, range from the most economically prosperous to the most economically deprived. Whatever the area of practice, whatever the subspecialty of training, whatever the patient population served, the most consistent finding in all of our alumni surveys conducted since the inception of the program has been our graduates affirmation that they have been extraordinarily well prepared for the work they have chosen to do. The feedback confirms our program's education strengths, and also challenges our faculty to ensure that all of future graduates report back to us with the same enthusiasm, gratitude and warm regard.
